1 Getting Started

After you have completed the installation phase, you are now able to have full access to MyMeteoCal and start having fun organising your events. After you access the server and the start the application, the following screen will be shown to you:

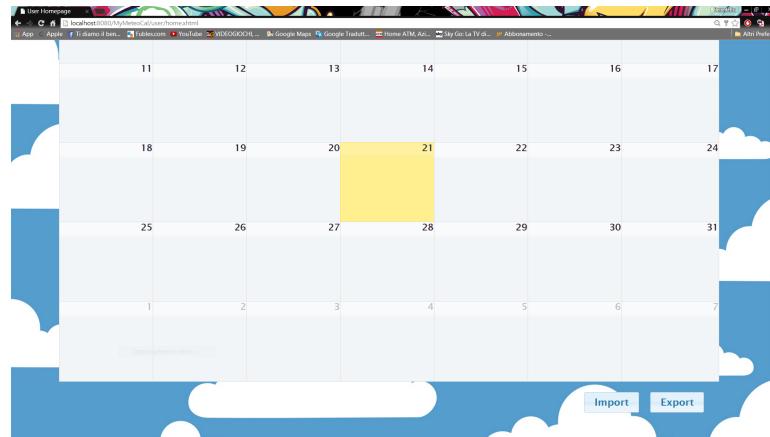

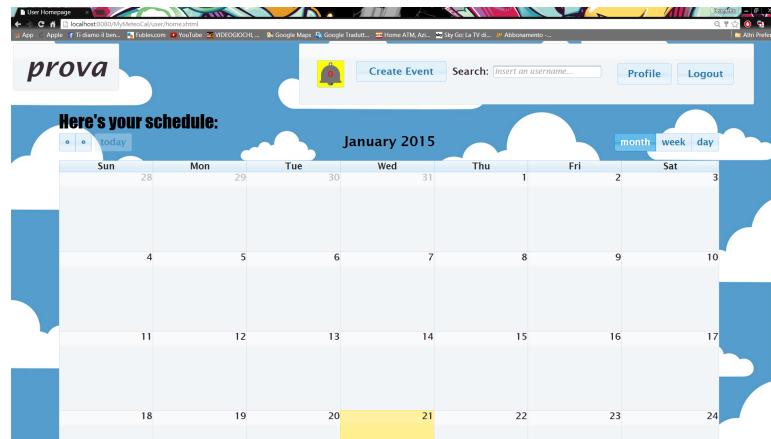

Here, by clicking on the register link, highlighted in blue, the system will show you the following form, that you have to fill with valid information in order to create a user profile:

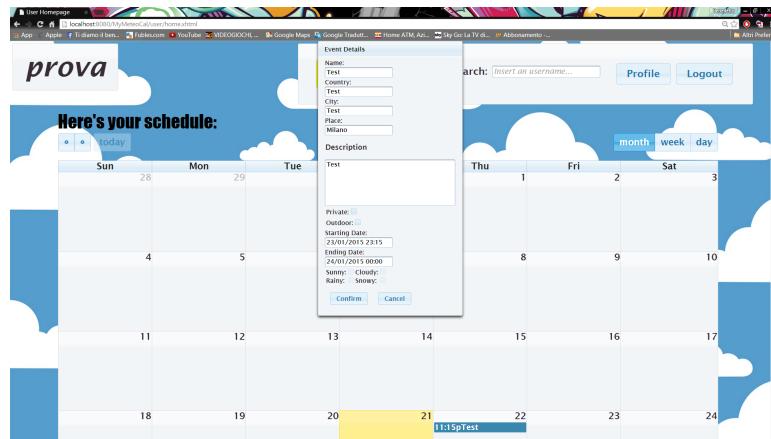

After this, you will be redirected to a confirmation page, confirming that your registration process has ended up just fine; here you will also find a link that you can click to go back to the welcome page (or just wait 15 seconds). After

you have obtained valid credentials, click on the login button, the system will show you a form that you will have to fill with your credentials, then(if valid), by clicking on the login button, you will be redirected to your home page.

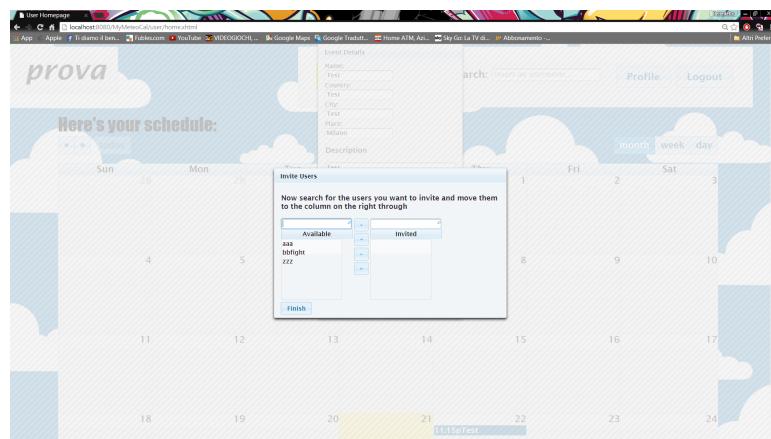

2 HomePage

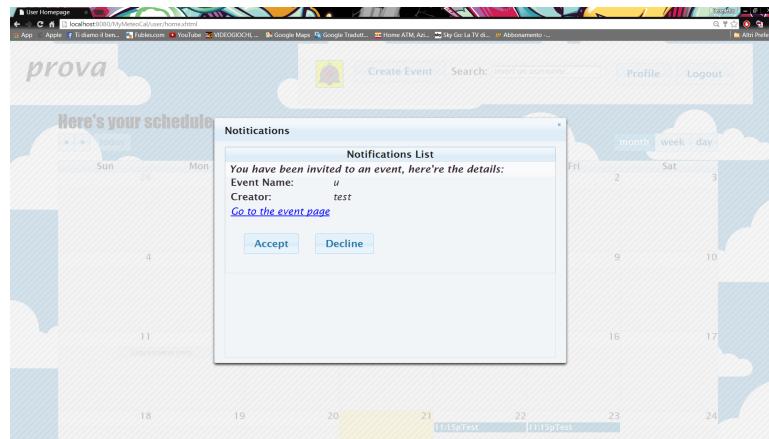

Here you can create an event by clicking on the relative button, that will show the following dialogue(please remember that a private event will be available only to those who have been invited to it, so if you want more privacy, set the flag to true):

After having inserted valid information, another dialogue will be shown in order to let you invite your favourite users to your event:

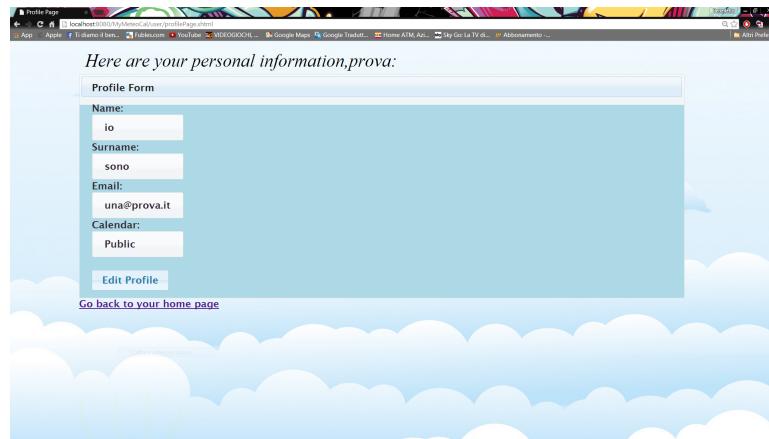

Once chosen, click on finish to create the event, a confirmation message will be shown and by clicking on continue you will be redirected to your homepage where the new event will be displayed on the calendar, the weather forecast related to its location will be shown in the event page. From the homepage you can also check your notifications by clicking on the bell icon(on it there is also a counter to let you know how many unread notifications do you have), a dialogue will be shown containing your notifications (if any):

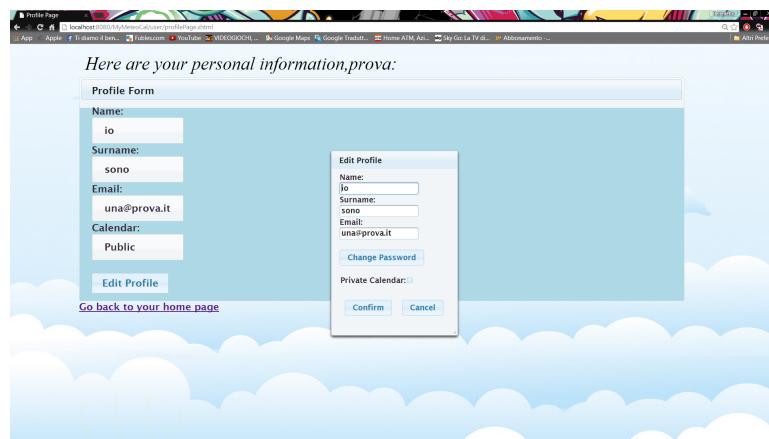

To accept an invite click on relative button, the same to decline; if you want more info on the event click on relative link to go the event page, where you can also accept through the buttons at the end of the page. You will also receive notifications regarding the weather forecast of events that you have created or that you are going to attend, according to the bad weather flags chosen when the event was created; to delete a weather notification after that you have read it, just click on the button delete notification. In the notifications dialogue, after that you have accepted, decline or deleted(according to the notification type) the last notification, you will be redirected to your homepage.

3 Profile Page

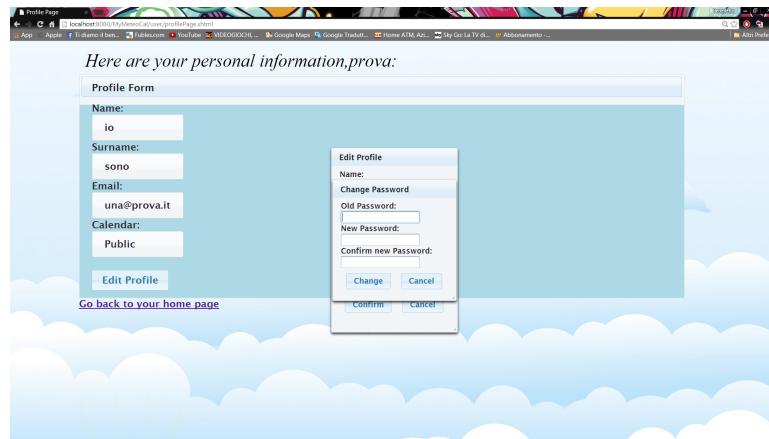

By clicking on the profile button the system will show you your profile page with your personal information, including the visibility of your calendar, a private calendar means that other user won't be able to access your calendar and its regarding information,a public one that your homepage can be reached using the search user function, here is the page:

By clicking on the edit profile button, the system will show the following dialogue:

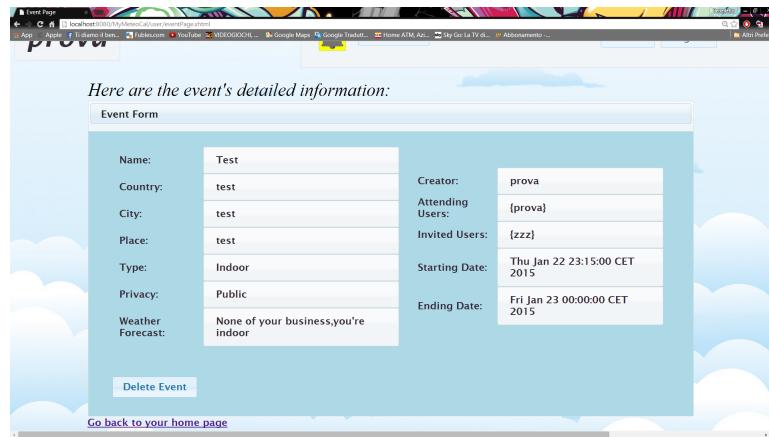

Here you can modify you profile information, including the calendar visibility. If you want to change your password, just click on the relative button and the system will show the following dialogue where you can insert your old password, the new one and the relative confirmation and then just click on change to complete.

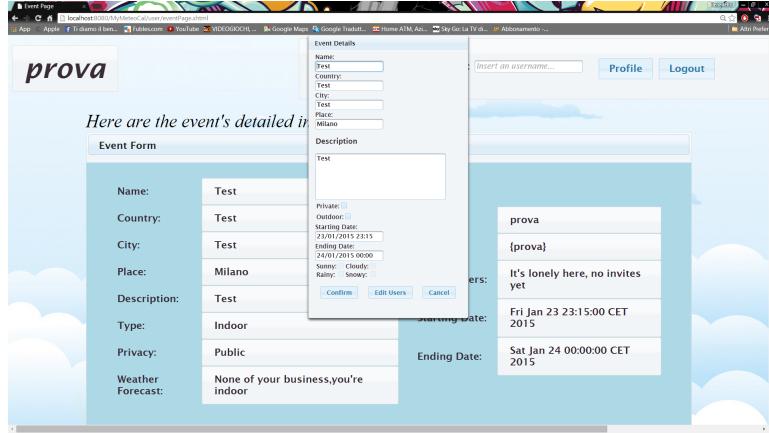

4 Event Page

This page could be reached or by clicking directly on an event of a calendar or also by clicking on the link in the invite notification; it contains the information relative to a specific event and if the event is private, it will be visible only to participants and invited users:

If you have been invited, here you can also accept or decline the invite or, if you are a participant, delete your participation (note that if the event is private and you decline the invite or delete the participation you will be redirected to your home page). If you are the creator of the event, instead of the homepage button the edit event button will be available; by clicking on it, the system will

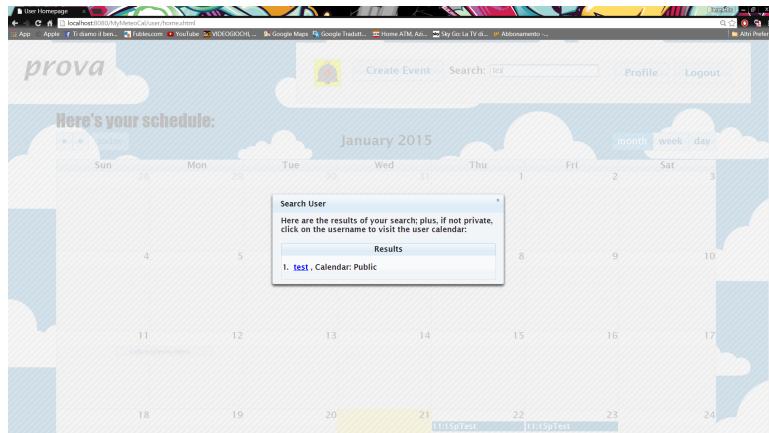

show the following dialogue:

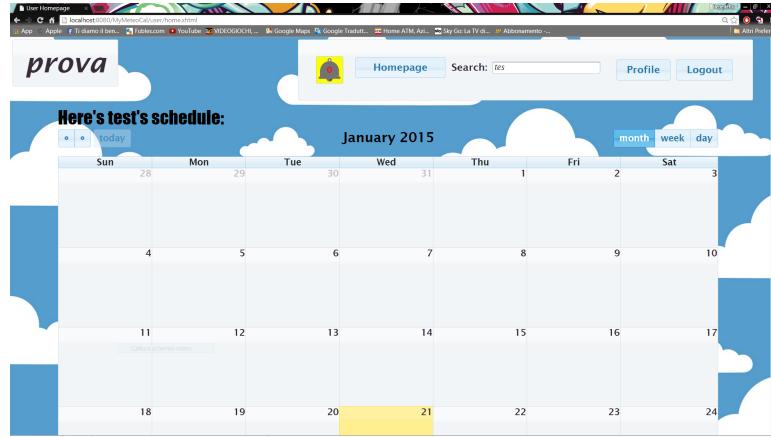

Here you can edit the event information and by clicking on edit users, handle also the invited users(note that if an event is modified, all the participants are removed and invited again in order to confirm the changes); if you want to delete an event(only if you are the creator), just click on the button Delete Event at the end of the page.Plus, at the end of the page there is also a link to go back to your homepage, if you are the creator, or to the user calendar if you are not.

5 Search User

By typing an username in the search bar, in the upper part of the homepage, and by clicking enter, the following dialogue will be shown:

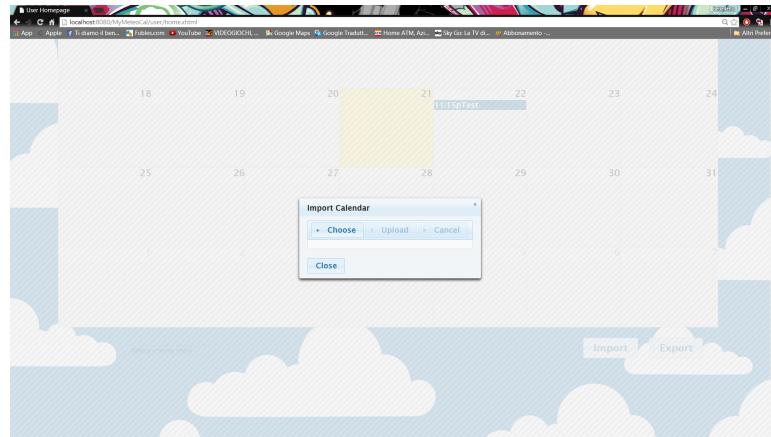

Here, if the user calendar is not private, you can click on the highlighted username in order to visit the user calendar, having access also to its public events:

6 Import

In the homepage, by clicking on the Import button at the end of the page, you'll be able to import another myMeteoCal calendar (only xml format allowed) in order to import the events on your personal calendar (note that events overlapping with ones that you already have on the calendar will be skipped). This is the relative dialogue:

By clicking on chose you can locate the calendar file on your pc(even more than one) and then upload it clicking on the relative button; when done click on close to go back to your homepage.

7 Export

In the homepage, by clicking on the Export button at the end of the page,you'll be able to export your calendar in XML format on your computer, having a copy of your personal events also on your machine for more safety.

8 Logout

To end your current session, just click on the logout button in the upper part of the homepage.

9 Conclusion

We hope you will find our application really easy to use and intuitive, during you experience you will be also guided by many messages during the most relevant operations (including the error ones in order to clarify which data are valid and which operations can be performed). For a detailed overview on the possible errors, just check the System Test Cases manual, we hope you have fun with our application!

**Have fun,
EJB**
